

**\$MYRE**

**THE SOLANA PUP**

**WHITEPAPER**

# THE ORIGIN:

Many may ask, who is Myre? Myre is the name of the newly born love puppy of Myro and Ada, the beloved dogs of Raj Gokal and Anatoly Yakovenko, the co-founders of Solana. Inspired by Grok, Myre emerges as the newly born princess of Solana and the heir to the Iron Throne of the Solana blockchain. This project pays homage to the legacy of Solana's founders and their loyal companions, while also responding to the popular demand for dog-based narratives in the crypto space. Myre was created to provide value to the ecosystem built by Raj, Anatoly, and their team, symbolizing the future of Solana's blockchain empire.

# THE VISION:

Myre is much more than just a memecoin. While memecoins are often dismissed as lacking value, they frequently outperform other assets in the crypto market. This criticism overlooks their real purpose: memecoins act as an entry point for everyday users and institutions, making the crypto space more approachable and enjoyable, and driving demand across various sectors.

Myre's vision reaches far beyond the typical memecoin role. It seeks to be a gateway that draws more consumers, institutions, and enthusiasts from other chains into the Solana ecosystem, thus accelerating on-chain activity and growth. This vision is realized through several key initiatives:

- Shifting perceptions of memecoins by fostering a strong and engaged on-chain community & supporting dog Charites worldwide.
  - Increasing Total Value Locked (TVL) within the Solana network.
- Expanding the number of Unique Active Wallets (UAW) by bringing new users to the Solana blockchain.
- Encouraging the use of charting tools and decentralized exchanges (DEX) such as Birdeye, Raydium, and Jupiter.
  - Driving adoption of Solana-based non-custodial wallets like Phantom Wallet.
  - Positively influencing the value and stability of the \$SOL token.

In the end, attracting more participants means spreading awareness and knowledge about the Solana ecosystem. Education is pivotal for widespread crypto adoption, and Myre adds significant value to Solana by creating a fun, secure, and educational environment for users to explore and learn.
